Abstract (en)

[origin: EP1950156A2] The method involves supporting a winding reel (2,2.1) in the device in the unwinding direction (R) by a control and regulating drive device (10) is initially turned such that the rotating of the winding reel is due to winding (3) at a flowing point (P), which detects the start of the winding (5) by a guiding device (16). The winding reel has a winding on both sides comprising a start of the winding pivotably mounted in the device (1). An independent claim is also included for a device, particularly a reel-spool storage station.
