Abstract (en)
[origin: EP1950165A1] In an elevator apparatus, a car is stopped at a plurality of stop floors including a first stop floor and a second stop floor. A first landing inspection device is provided at a landing of the first stop floor. A second landing inspection device is provided at a landing of the second stop floor. The first landing inspection device is provided with a first maintenance service operation portion for carrying out a maintenance service of the car, and a first emergency service operation portion for moving the car in an emergency. The second landing inspection device is provided with at least one of a second maintenance service operation portion for carrying out a maintenance service of the car, and a second emergency service operation portion for moving the car in an emergency.
