Abstract (en)

[origin: EP1950170A1] The height measuring device has a platform of a lifting device is movable along a lifting frame fixed on a drive part and a unit for receiving a load guided on the platform is actuated by another lifting device. An evaluation unit (30) receives a actuating signal (LGS,PS) of both the lifting devices for height measuring signals of the receiver (E). A memory (32) stores the height measuring signals with an actuating signal of the lifting device and another memory (34) stores the height measuring signals with an actuating signal of the another lifting device.
