Abstract (en)  
[origin: EP1950331A1] The nonwoven material guide device has a nonwoven material guide plate (9) for supporting a nonwoven material (V) released from a tear-off cylinder pair. The device is arranged between the tear-off cylinder pair and a scuttle roller pair. Guide walls (15) run in the longitudinal section (LA) at an angle between 10[deg] and 30[deg] in the conveying direction (FR) of the nonwoven material and are arranged in the area of their end sections, which are arranged directly from the scuttle roller pair and are provided with a guiding element (17).
