Abstract (en)

[origin: EP1950348A1] The device (16) has chamfers (17, 17') for forming chamfer tracks running in a longitudinal direction of a rail such as a bullheaded rail. A profile region of the rail is assigned to each chamfer, and a drive unit (18) is provided for each of the chamfers. The chamfers are arranged in such a manner that the chamfers overlap the formed chamfer tracks and contact with the rail in operation. The chamfers for adjacent profile regions of the rail are arranged offset to each other. An independent claim is also included for a method for reshaping a rail.
