Abstract (en)

[origin: EP1950362A1] The pool has a staircase (2) with a step (21) extends over the length from a side (1) of the swimming pool, and a rolling and unrolling device (3) for rolling and unrolling a cover. The device (3) is housed in an internal volume (210) of the step. An access unit (212) accesses the internal volume and is movably mounted between the opening position and the closing position to permit the partial passage to the cover. The access unit is extended in upper part of the step in the horizontal plane.
