Abstract (en)

The present invention relates to a handle group (1) for a motor vehicle door comprising a grip (2), a control lever (20) associable to the closing mechanism by a Bowden cable or a tie rod, wherein the grip is normally disengaged from the control lever. The handle group further comprises a coupling lever (30) actuable by a safety lever (40) arranged along a back surface of the same grip, suitable for engaging the control lever (20), thus allowing the control of the door opening from the grip. In the event of collisions, the handle group prevents the inertial forces acting on the grip from opening the closing mechanism; this is enabled by the fact that if the safety lever (40) is not pressed, the grip is disengaged from the control lever (20).
