Abstract (en)

[origin: EP1950392A1] The device (10) has a yoke (22) and a connection unit (28) respectively connected to annular and concentric assemblies (6, 8). The unit is housed between lugs (26a, 26b) of the yoke. A screw (36) crosses yoke orifices (32a, 32b) of respective lugs and a passage orifice (30). The screw has a threaded end (46) cooperating with a nut system (44), and a clamping sleeve (42) crossing orifice (32a). The sleeve forms a shoulder (50) located between the lugs. The unit is located remote from the lug (26a) and fixed on both sides respectively against the shoulder and against the lug (26b). An independent claim is also included for a turbomachine assembly comprising annular and concentric assemblies.
