Abstract (en)

[origin: EP1950495A2] The method involves conveying combustion air to a combustion chamber (14) by a combustion air conveying arrangement (20), and conveying fuel to the chamber. Height information that represents a height position of a vehicle heater (10) is detected using a height detecting arrangement (32). A fuel conveying arrangement (16) and the air conveying arrangement are operated in a preset manner for a set of differently selectable heat output stages, where a subset of the output stages are locked against the selection independent of the height information using a control device (30).
