Abstract (en)
[origin: EP1950632A1] The watch has a middle part (12) including a top face (32) arranged for receiving a polygonal bezel (16) made of a non-metallic material. Corners of the bezel are truncated, and the middle part is fitted with angular elements (40a-40d) made of metallic material, secured to the top face and arranged to be substituted for the truncated corners of the bezel, when the metallic material is mounted on the middle part. The angular elements are obtained by machining the top face of the middle part.
