Abstract (en)
[Problem] To provide a card processing apparatus that, even being a card processing apparatus equipped with a case, can avoid deterioration of convenience performance and prevent any water accumulation inside the case and consequently decrease a failure rate. [Means to Solve the Problem] The card processing apparatus includes: a front bezel 10, a card inlet slot 12 placed in the front bezel 10, a card path 21 continuously extending from the card inlet slot 12, a shutter 22 installed between the card inlet slot 12 and the card path 21 for opening and closing the card path 21, a case body 20 closely contacting the front bezel 10 and internally including the card path 21, a tilted part (a bottom wall 20c) that is tilted so as to become further away gradually from the card path 21 in a direction from an inner part of the case body 20 toward the front bezel 10 to guide a liquid infiltrated through the card inlet slot 12, and liquid drain holes 30 positioned at the front side of the front bezel 10 to go through continuously to a side of the case body 20 for draining the liquid.
