Abstract (en)

[origin: EP1950722A1] The method involves activating an electromagnetic signal receiving unit, and activating an order emitter (EMA) for transmitting a signal to an order receiver, where the signal includes an identifier of the emitter and command. The signal is received by an order transmitter (SCN1). A relation between the command comprised in the signal and a specific identifier of the transmitter is stored in a transmitter memory. An independent claim is also included for a method for operating an order transmitter in a home automation system.
