Abstract (en)
[origin: WO2007060082A1] A drawer (1) can be displaced relative to a basic furniture structure, via a pull-out guide (6, 7, 8), from a position within the basic furniture structure into a pulled-out position in front of the basic furniture structure, wherein the drawer (1) has, on the opposite sides, in each case at least one gearwheel (10) which meshes with a rack (30), secured on the basic furniture structure, and is coupled to a gearwheel (10) on the opposite side. The racks (30) can be extended in length in each case via a pivotable lever (11), in order to ensure that the drawer (1) is also guided by the gearwheels (10) in the pulled-out position. A pivotable lever (11) can be disengaged from the meshing gearwheel (10) in order for it to be possible to correct skewed positioning of the drawer. This ensures that the drawer is guided by the gearwheels over its entire displacement path.
