Abstract (en)
[origin: WO2007055672A1] Present invention relates to roller mill machines used for grain milling. The invention particularly relates to use of roller mill machines by means of angular positioning of milling rolls (1, 2) cylindrical ground in cylindrical machine used in grain and similar product milling and bearing embodiment. The said angular positioning is conducted once during commence of the work and can be used at that value constantly and it is also possible to change the value of angle (a) according to changing conditions.
