Abstract (en)
[origin: WO2007057088A1] The invention relates to a device for producing pre-cast concrete blocks by compacting a concrete mixture under the effect of vertical vibrations. Said device has a mold (FR, FE) and, vertically displaceable in relation thereto, a load-application device (AE) and a support which can be set vibrating. The invention is characterized in that one or more of the assemblies that can be vertically displaced in relation to each other is horizontally centered by magnetic forces.
