Abstract (en)
[origin: WO2007057096A1] The invention relates to a device for producing pre-cast concrete blocks, especially to superstructures of molding machines. A molding frame for receiving different interchangeable molding inserts is arranged vertically in the molding machine in an approximately constant position. A vibrating table can be vertically displaced in relation to the molding frame and braced therewith. The invention also relates to different types of vibration excitation and different types of support of the molding frame on the machine frame or a base.
