Abstract (en)

[origin: FR2893964A1] The device has a set of panels, where each panel (24) has undercut grooves that open laterally onto an inner face of the panel and longitudinally onto an upper edge and a lower edge of the panel. A sliding element of a spacer (5) slides vertically into one groove via the upper edge of the panel, where the sliding element is placed on both sides of the spacer. The spacer has a fastening unit for fastening to another spacer (13) in a vertical direction so as to form a succession of non-deformable parallelograms.
