Abstract (en)
[origin: WO2007059948A2] A detector device for qualitatively or quantitatively detecting the presence of a predetermined gas in a gas mixture comprises a capillary device (10) with one or more capillaries (12), which connects a first side (14) of the capillary device (10) to a second side (16) of the capillary device (10), and comprises a pressure detector (20) connected to the second side, the capillary (12) tapering at least in sections from one side to the other side of the capillary device (10).
