Abstract (en)
[origin: US7905370B2] A simple, inexpensive, reliable and maintenance-free dispenser in which the stored products are offered automatically on the outside of the dispenser where they can be grasped by a hand without further manipulation. The dispenser includes housings in which the products, stacked in a column, are stored and moved by gravity and, at the base of each housing in front of the first product of the column, outlet orifices are closed by a closing membrane with slits. A slope is provided, in the lower rear part of each housing, to automatically advance the first product a predetermined distance through the outlet orifice so that the product partially emerges and can be grasped by hand on the outside of the dispenser. The dispenser can be used to automatically dispense consumable products, such as drinks, without prepayment, and for all types of industrial, commercial, home and other applications.
