Abstract (en)

[origin: WO2007046739A1] The invention is directed to a system (100), a service-provider (140) and a mobile terminal (120) for downloading media products by: transmitting a signal from a broadcasting station (110), which signal comprises media content and data content, wherein the data content at least comprises a media product identifier connected to the currently broadcasted media content; receiving the broadcasted signal by means of a mobile terminal (120) and extracting the media product identifier from the received data content; transmitting a download request from the mobile terminal (120) to the service-provider (140) via a wireless telecommunication network (130) as a response to a command from a user of the terminal (120), which download request at least comprises the media product identifier and a unique user subscriber identity (122) held by the terminal (120); executing an authorization control by means of the service-provider (140) based on the received user subscriber identity (122); executing a media product retrieval by means of the service-provider (140) based on the received media product identifier, as a response to a successful authorization of the subscriber; transmitting the retrieved media product from the service-provider (140) to the mobile terminal (120) via the wireless telecommunication network (130).
