Abstract (en)
[origin: EP1952741A2] The holder (1) has cone-like retaining stubs (2, 5) respectively arranged at retaining clips (4, 7), where pointed sided of the retaining stubs faces each other. A supply roll (9) is clamped between the two retaining stubs, where the retaining stub (2) is fixed relative to the retaining clip (4) in a torque-proof manner. Two springs press the respective retaining stubs against the supply roll inserted between the retaining stubs, where the distance between the retaining clips is adjustable. The stubs are provided with an anti-slip coating of thermoplastic elastomers (TPE).
