Abstract (en)

[origin: EP1952953A1] The tool (1) has an intermediate drive shaft serving as an intermediate element (9) inside an area of a rotary bearing of a turret (7). An end of the intermediate drive shaft in a housing (2) is driven by a drive shaft (4). A locking element is moved from a locking position into a rotary position. Coupling parts (10, 11) and an intermediate shaft are provided so that one coupling part is in contact with another coupling part of coupling heads (8a, 8b) provided in an active position. The coupling part (11) is designed as a bevel gear, and the heads are designed as a drill chuck and a recess.
