Abstract (en)

[origin: EP1952983A1] The refracting point (10) has a cord (18) that serves for engaging a traction element designed as a chain. A laminar element (11) sectionally loops the cord and is connected with the cord. The laminar element is made of fluoroc rubber, and the cord is firmly connected with the laminar element by vulcanizing. The laminar element is made of fluoroc hydrocarbon polymersate, and the cord is designed from a steel wire. An overlapping area of the laminar element is formed by partial looping of the cord and sewn with fibers made of heat resistant yarn.
