Abstract (en)

[origin: EP1953111A2] A hoisting clamp comprising a first and a second contact part, mutually connected by a connecting bracket, the first contact part having a first contact surface and the second contact part having a second contact surface, which contact surfaces face each other and have a mutual distance, while a locking bracket is provided, displaceable relative to at least the first and second contact surface, while on the locking bracket a hoisting element and a clamping part are provided, at a distance from each other, the clamping part being operatively movable against an object inserted between the first and second contact surface by exertion of a tensile force on the hoisting element.
