Abstract (en)

[origin: EP1953303A2] The component (1) has a reinforcing unit for carrying a shearing stress and for increasing stability of the component, where the unit includes an anchor component. The anchor component is arranged in inner and outer concrete layers (2, 3) and extends from the inner concrete layer to an intermediate area (5). A layer is provided in the intermediate area, and connecting units (6) extend over the inner and outer layers and the layer. The anchor component is provided in the layer and extends from the layer into the inner and outer layers. An independent claim is also included for a method for producing a wall component.
