Abstract (en)

[origin: EP1953312A1] The lock has two lock sides attached to an outer side and inner side of a door, and a handle (7) at one of the lock sides. A locking device functional unit (19) for locking and/or unlocking the lock is operated by upper and lower lock cylinders (14, 16). Receivers (13, 15) for the cylinders open the respective sides in an installation position of the lock underneath the handle. Keyhole openings (17, 18) of the lock cylinders are accessed from the respective lock side. The cylinders are arranged in alignment with the receivers, and the openings run in vertical direction during the alignment.
