Abstract (en)

[origin: EP1953777A1] A multilayer capacitor in which the width of a frequency band in which low impedance can be obtained is increased while low ESL and high ESR are achieved. In a capacitor body (8), first capacitor portions (11) and a second capacitor portion (12) are arrayed in the direction of lamination. While a resonant frequency of the first capacitor portions (11) is set to be higher than a resonant frequency of the second capacitor portion (12) so that the first capacitor portions (11) contribute to low impedance, an ESR per layer of the second capacitor portion (12) is set to be higher than an ESR per layer of the first capacitor portions (11) so that the second capacitor portion (12) contributes to high ESR. Further, a combined ESR of the first capacitor portions (11) is set to be equal to or substantially equal to a combined ESR of the second capacitor portion (12).
