Abstract (en)
[origin: DE102005055565A1] The stand component consists of individual surface sections (10) of corrugated cardboard or solid board which are separated from each another along a common center line (12) which at the ends changes into a connecting line (14) in each case which defines two edge surface sections (16) by their abutting ends which are adjacent to each other. The surface sections extend along the center line in each case and with it form the sidewalls of the stand component.
