Abstract (en)
[origin: WO2007060219A1] A ski binding for downhill skiing and cross-country skiing has a plate (5) which can be pivoted upwards in the front region about an axis (6.26) located transversely to the longitudinal direction of the ski. A front ski binding (2) and a rear heel holder (3) for a ski boot or cross-country ski boot are fastened on the plate. At least one catch element (9.28) which is arranged in front of, or in the region of, the rear sole holder (3) can be used to secure the plate, in its rear region, on the abutment fitted on the ski. In addition, at least one catch element is arranged in the front region of the plate. The plate is fixed on the ski, and reinforced, in the manner of a conventional downhill ski binding by the further catch element in the front region of the ski binding and, in the locked state, is anchored at the front end and at the rear end, and at a number of locations therebetween, on parts of the ski or parts which have been fixed to the ski.
