Abstract (en)
[origin: WO2007057456A1] A light emitting panel consists of a glass sheet and electronic components which are used for generating light radiation and are arranged inside the panel. The inventive panel comprises an emitting structure assembly containing one or several glass sheets and the electronic components provided with at least one light reflecting structure, wherein the emitting structure is provided with means for mechanically interlocking with the reflecting structure. When necessary, a diffusion system can be added to the assembly.
