Abstract (en)
[origin: WO2007063099A1] A bicycle saddle, in particular a man's bicycle saddle, has a two-part saddle shell with a front part (10) and a posterior part (12). A saddle framework (16) is connected to the lower sides of the front part (10) and of the posterior part (12). In order to adjust the hardness of the saddle, a variable spacer element (24) is provided between the front part (10) and the posterior part (12) in order to adjust the horizontal distance between the front part (10) and the posterior part (12).
