Abstract (en)

[origin: DE102005056627A1] Device has blanks and prior to the blanks (10) being severed, the material web (24) is guided through a stamping device (60). In this case the material web is provided with stamped regions or stamped formations (22), which are spaced apart from one another in the longitudinal direction of the material web. The web speed is varied, in order to compensate for incorrect positioning, whereas the material web is guided freely through the stamping device in order for non-stamped regions (61) to be produced. An independent claim is included for the device for producing blanks for inner wrapper of cigarette group.
