Abstract (en)

[origin: WO2007054431A1] The invention relates to an iron comprising an iron housing (2), a liquid container (3), the rear section (21) of the iron housing (2) having an opening (23) for filling the liquid container (3) and a pressure equalisation device, which is designed to equalise the pressure between the liquid container (3) and the area surrounding the iron (1). The pressure equalisation device includes an air conduction channel (5), a first end region (51) of which (5) is guided in the front region (30) of the liquid container (3) and a second end region (53) of which (5) extends into the rear section (21) of the iron housing (2) and emerges from said section (21) of the iron housing (2).
