Abstract (en)  
[origin: WO2007059587A1] A ground-working apparatus is fastenable to driving machinery and is configured to engage ground to be worked. The ground-working apparatus includes a permanent part. At least one replacement part is engageable with the permanent part and is configured to be replaced with a further replacement part in an operational cycle. At least one resilient fastener defining a central apex can engage both the permanent part and the, or each respective, replacement part to fasten the, or each, replacement part to the permanent part.
