Abstract (en)

[origin: DE102005056788A1] The catch has a handle (20) which is reversely rotated from its upper stroke position to a resting position, by a resetting force, during a final stage. The handle lies on a contour (16), based on its spring loading, in a final stage. The handle is guided during the reverse rotation of a latch (10) along the contour in the direction of a stopper. An anti stopper (21) is provided with another stopper (12) for engaging within a resting unit.
