Abstract (en)
[origin: FR2893593A1] The housing has two articulated plastic half-shells including a locking unit for locking and incorporating a remotely detectable marker. Transverse shafts are connected to edges of the half-shells, respectively, by a link arm along one of the edges of the half-shells. The shafts and the arm are molded into a single piece with the corresponding half-shell. The half-shells include transverse recesses for receiving the shafts to form pivoting articulation. The recesses open outwards to permit the arm and the shafts to be inserted into multiple complementary recesses when the housing is open.
