Abstract (en)

[origin: WO2007063090A1] The invention relates to a method for the diagnosis of ureteropelvic junction (UAS). In said method, the presence or absence of at least one polypeptide marker in a sample is determined, said polypeptide marker being selected from markers 1-277 (frequency markers), or the amplitude of at least one polypeptide marker is determined, selected from the markers 278-308 (amplitude markers), which are characterised by values for the molecular masses and the migration time (CE-time).
