Abstract (en)

[origin: WO2007062943A1] The invention is distinguished by an apparatus for detecting an electrical variable of a rechargeable battery and by a method for producing said apparatus, the apparatus having: a measuring element (1), a printed circuit board (4) and a contact element (5) having a first end (6) and a second end (7), wherein the first end (6) of the contact element (5) is electrically connected to the printed circuit board (4), characterized in that the second end (7) of the contact element (5) is electrically connected to the measuring element (1) by means of a welded joint.
