Abstract (en)
[origin: WO2007059169A2] A method for effecting the execution of an application function on an application server from a client device via a proxy server is disclosed. The method includes transmitting a first text message pertaining to a request to execute the application function to the proxy server. The method additionally includes authenticating a user associated with the first text message by authenticating the user via a confirmation address that is different from the text message origination address. After authentication, the method also includes executing the application function at the application server as specified by the first text message, whereby the first application function is ascertained based at least on the text message destination address.
