Abstract (en)

[origin: WO2007063070A1] The invention relates to a device and method for dynamically updating prohibited flying areas on a flying aircraft board. The inventive method consists in defining the geometry of restricted areas and the entry conditions thereto depending on the aircraft, in characterising the aircraft with respect to the conditions for entering said areas and in determining the flying areas prohibited for the aircraft. Said invention can be used for aeronautics.
