Abstract (en)

[origin: EP1955951A1] The method involves moving a roll (2) perpendicular to a longitudinal axis (4) by a roller bearing device (5) designed as a roller transport device (6). Blanks (18.1, 18.2) are cut from a parallelly aligned and polyethylene-coated packaging paper web (11) by cutting devices (17.1, 17.2) during continuous movement of the roll. The polyethylene-coated packaging paper web is discharged from front sides (3.1, 3.2) of the roll after manufacturing the blanks, where the blanks correspond to the front sides of the roll. An independent claim is also included for a device for frontal packing of a roll.
