Abstract (en)

[origin: EP1955971A1] The clamping device (100) has a sleeve (7) with cylindrical inner wall (11) surrounding the shaft and clamping body (2). The clamping body is pivoted on a guide bolt (3) running tangential to the shaft outer side and connected rigidly with the cage and placed in position on the guide bolt opposite to the sleeve inner wall in a clamping or non-clamping position. A driving collar (4) is arranged within the clamping body cage (1). The driving collar is connected with the clamping bodies. An independent claim is also included for a paper cardboard sleeve or plastic sleeve provided over the clamping device.
