Abstract (en)

[origin: EP1956142A1] The method involves isolating a material web (6) in a strip. The remainder web is led away to a drying cylinder (32) that serves as removal drying cylinder, so that the remainder web is led through the entire dry end (2), and the material web is broadly driven. The remainder web is led away according to the drying cylinder (32). The remainder web is lead away between the drying cylinder (32) and a drying cylinder (33). An independent claim is also included for a device for manufacturing a material web.
