Abstract (en)

[origin: WO2007062961A1] A telescopic guide (1) for a furniture part, such as a drawer (9), arranged displaceably in a furniture carcass (3) comprises an extension means, with a running rail (2) which can be latched to the furniture part via a latching element (7), which can be fixed on the furniture part, and with at least one guide rail (4), which can be fixed on the furniture carcass, and preferably with a central rail (5) which increases the extension length and is arranged between guide rail (4) and running rail (2), wherein the latching element (7) has two latching lugs (7d, 7e) and the running rail (2) has two or more cutouts (8, 9) arranged offset with respect to each other in the insertion direction of the drawer. The latching lugs (7d, 7e) and cutouts (8, 9) are arranged in such a manner that either only the first latching lug (7d) engages in the first cutout (8) or the second latching lug (7e) engages in the second cutout (9), thus simplifying the installation.
