Abstract (en)  
[origin: WO2007057544A1] The present invention relates to a bicycle crankset (1) mounted on the frame (3) of said bicycle, said crankset (1) consisting of two cranks (7, 9) and at least one chainring (25), said cranks being connected at their axial end (15, 17) by a connecting spindle (31). It is noteworthy in that the connection of the crankset to the frame is provided by means of assembling the axial ends to the frame, thus mechanically relieving the connecting spindle and reducing the dimensions of the connecting spindle and the distance "e" between the axial ends. The crankset is also noteworthy in that each crank takes a pedal which is fitted directly to the crank. This helps to reduce the weight of said crankset.
