Abstract (en)
[origin: WO2007067804A1] This invention provides a multi-compartmentalized container (10) made of a thermoplastic material for packaging bundles of tapered filaments. The container has a bottom receiving section (12) comprising a plurality of wells (18) and a cover (14) containing wells (20) that correspond to the wells (18) in the receiving section. The receiving section wells (18) contain ribs (26) that aid in guiding the filament bundles into the well. The container allows ease of handling filaments during packaging and securely holds the filaments during shipping to reduce filament damage.
