Abstract (en)  
[origin: FR2893610A1] A surface structuring forms an array of patterns with a characteristic submillimetric dimension on a planar surface of a product with a rigid glass element (1) and an overlying layer (1a). The structuring on this layer by plastic or viscoplastic deformation is carried out by contact with a structuring mask (10) and by applying pressure. The structuring is performed in a continuous movement, parallel to the surface, of the product, and by a movement of the mask about an axis parallel to the plane of the surface of the product. Independent claims are also included for : (1) a structuring device for putting this method of surface structuring into service; (2) the structured glass product obtained.
