Abstract (en)
[origin: WO2007054654A1] The invention relates to a method for building a harbour structure (100) communicating with a water body (28). The inventive method consists in building in the ground at least one closed-type continuous curvilinear wall comprising at least one arcuate wall segment whose intrados is oriented to the inside of the structure (100) in such a way that an arching is produced in front of the structure external side, in excavating the volume delimited by the continuous wall, in embodying at least one opening (20) in said continuous wall in such a way that said volume is enabled to communicate with the water body (28).
