Abstract (en)  
[origin: WO2007065972A1] The invention relates to a fastener for fastening a sunshade to the edge profile of a balcony glazing including a gap. In the fastener, there are a base (10) in which are arranged L-shaped fastening brackets (12) for fastening to the sunshade and a fastening part (14) by means of which the fastener is fastened to the edge profile. Advantageously, the shape of the base is plate-like, whereby the fastening part is arranged on a first surface of the base and the fastening brackets are arranged on a second surface of the base. By means of the fastening part, the fastener can be fastened to the gap of the edge profile without separate fastening elements and without tools or auxiliary devices. In the fastening part, there are a first mating surface (20) which is arranged to settle against the first edge surface of the gap, and a second mating surface (22) which is arranged to settle against the second edge surface of the gap. Advantageously, the shape of at least the second mating surface is through-like. The first mating surface and the second mating surface are connected to each other by a spring part (18) for pressing the mating surfaces against the edge surfaces of the gap. The material of the fastener is advantageously plastic, composite material or metal, such as aluminium.
