Abstract (en)
[origin: WO2007062618A1] The invention relates to a torque transmission device in the drive train (1) of a motor vehicle for transmitting torque between a drive unit (3) with a unit which is premounted at the drive end and a gear mechanism (5) with a unit which is premounted at the gear mechanism and which is connected in a rotationally fixed fashion, by means of an axial plug-in connection, to the drive unit which is premounted at the drive end. In order to reduce the noises occurring during operation, a friction device is arranged between the premounted units.
